

IN THE ABSTRACT

Please replace the Abstract at page 9, lines 3-18 with the following replacement

Abstract:

A computer code generator for generating a computer code based on a specifications file. The generator includes a front end which generates an intermediate file based on a grammatical and syntactical analysis of a specifications file. The intermediate file includes a syntactical tree, which describes data in the specifications file. All the data extracted from the specifications file by the front end is associated with a node in the tree. The generator also includes a template which includes programming rules associated with each node, as a function of the code to be generated. A back end is also included in the generator, which generates output code by reading the intermediate file and the syntactical tree.
